# BANJO POLYPROPYLENE FITTINGS

- Precision molded in polypropylene.
- Glass reinforced for stability, strength and toughness.
- Hose barbs are molded specifically to fit properly into hoses.
- Sizes range from 1/4" to 4"
- Combination sizes available for elbows and straight barbs.
- Excellent chemical resistance.

- Pressure to 150 P.S.I. at 70°F
- Max. Temp. 185° F.
- Banjo polypropylene fittings have excellent resistance to chemicals, including acids.
- Banjo polypropylene fittings have excellent resistance to water. Unlike nylon fittings they do not swell up when in use and shrink again when allowed to dry out, causing endless leaks each time the process is repeated such as when used on a field sprayer.

- Banjo polypropylene fittings in most part have a heavier wall, longer tapered threads and longer hose barbs. The two hose barbs are spaced so that a hose clamp can be placed between the two barbs making it virtually impossible to remove the hose without first removing the clamp.

Sprayer Parts Warehouse polypropylene fittings are made exclusively from Tenite P6M 52-015 resin homopolymer reinforced with random glass fibers.

Polypropylene fittings are generally acceptable for use at working pressures up to 150 psi at ambient temperatures. As with all thermoplastics, an increase in working temperature is accompanied by a decrease in operating pressure. For example, at 140°F, the upper working pressure limit is 90 psi.

Polypropylene has excellent resistance to a broad range of chemicals including most agricultural chemicals, acid based fertilizers, ammonium compounds, calcium carbonate, ethanol, hydrochloric acid, magnesium sulfate, oxalic acid, propionic acid, phosphoric acid and most sodium compounds.

Polypropylene fittings should not be used with aromatic hydrocarbons, carbon tetrachloride, gasoline, hexane, kerosene, nitric acid, sodium hypochlorite, toluene trichloroethylene and xylene.

### Recommended

- Hand tighten plus another turn with box or open end wrench
- Use at normal ag sprayer spring and summer field conditions
- Use for acid resistance
- Use Teflon tape or Teflon sealants
- Use for UV resistance, prolonged exposure to sunlight
- Use for cosmetic appearance

### Not recommended

- Use impact wrenches
- Overtighten
- Use at very hot or cold temperatures over 150° or under 32°F
- Use with toluene or xylene based chemicals

### PHYSICAL PROPERTIES OF P6M52-015 POLYPROPYLENE

Specific Gravity	0.91
Heat Distortion	170°F
Rockwell hardness (R)	85
Izod Impact	1.3ft.-lbs./in.

# NYLON FITTINGS

Sprayer Parts Warehouse nylon fittings are made from engineering grade 6/6 virgin resin. Nylon fittings are generally acceptable for use at working pressures up to 150 psi at ambient temperatures. At very low pressures, temperatures can approach 175°F with no degradation in the performance of the nylon fitting.

Nylon has good resistance to a fairly broad range of chemicals including most agricultural chemicals, ammonium compounds, detergents, diesel fuel, ethanol, gasoline, hexane, magnesium sulphate, most sodium compounds, trichloroethylene and zinc sulphate.

Nylon fittings should not be used with acid-based fertilizers, bromine, chlorine, fluorine, hydrochloric acid, iodine, nitric acid, phosphoric acid, sulfuric acid and xylene.

## Recommended

- Use for high structural or physical strength
- Use for broader temperature ranges below zero to 200°F

## Not recommended

- With acid-based fertilizers
- With xylene-based chemicals
- With teflon tape
- In situations where long exposure to ultraviolet radiation will occur

## PHYSICAL PROPERTIES OF NYLON 6/6

Specific Gravity	1.12
Heat Distortion	375°F
Rockwell hardness (R)	120
Izod Impact	1.9ft.-lbs./in.
